

INFORMED CONSENT WITH THE PERFORMANCE

(Informovaný souhlas pacienta s výkonem)

(becomes a part of the documentation)

Patient's name and surname:		Date of Birth:
The doctor responsible for patient's edification :		
Position / Department :		

Patient's edification about the operation:	General anesthesia <i>(Celková anestezie)</i>
The purpose of the operation /indication/:	General anesthesia eliminates pain of surgery by suppression of reception and processing of painful stimuli in the brain. The patient is placed in artificial sleep with drugs and anesthetic gases. Patient has secured airways and is connected to an artificial lung ventilation. During the performance the activity of the heart and blood circulation are monitored, evaluated pulmonary functions and blood oxygenation. After the operation the patient is tracked and monitored in the ICU or standard unit.
Possible complications /restrictions/ :	Hemodynamic instability with a decrease in pressure, heart rhythm disorders, heart attack, stroke, postoperative respiratory failure, renal insufficiency (ie, renal dysfunction) , urinary retention (ie. inability to urinate) with the need to introduce urinary catheter, postoperative nausea possibly vomiting, pain in the neck, cough and hoarseness. Other complications are statistically less than 1% rate , thus omitted.

Patient's consent with the performing of the medical operation:	<p>I patient (legal guardian) hereby declare that I was informed in a clear and comprehensible form about the treatment. I declare that I have clearly understood all the information, I am familiar with the procedure and complications of the operation. Also, I declare that I have had the opportunity to ask questions and discuss with the doctor about this issue.</p> <p>I agree with the administration of general anesthesia.</p> <p>I further agree that for the purposes of better quality monitor of the overall state of the organism following procedures were performed during anesthesia:</p> <ul style="list-style-type: none"> - <u>Introduction of the arterial catheter</u> (ie. catheter into the artery), which allows direct measurement of blood pressure and arterial blood sampling for accurate laboratory examination. Potential risks: injury to the artery wall, hematoma, infection. - <u>The introduction of the permanent catheter (urinary catheter)</u>, which enables accurate measuring of the amount of urine and prevents retention of urine in the bladder after anesthesia. Potential risks : urethral trauma, infection.
---	---

	<ul style="list-style-type: none">- <u>Introduction of gastric tube through the nose.</u> Probe will allow drainage of gastric content during and immediately after the operation. Potential Risks : Injury to the nasal mucosa , bleeding from the nasal mucosa. <p>At the same time I declare that in the event of unexpected complications I agree to carry out all other necessary and immediate treatments which are necessary to save my life or health.</p>
